1. 見えに基づく認識問題: 姿勢推定

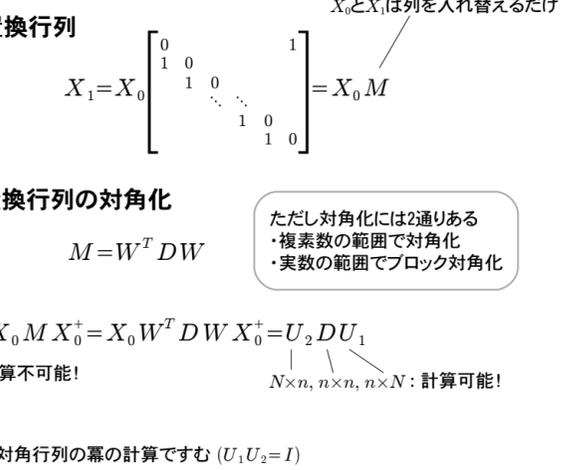

- 物体の見えに基づく姿勢推定とは
従来手法
線形手法: CCA, PCR, PLSR, 線形重回帰, EbC
非線形手法: kernel CCA, kernel PLSR, Support Vector 回帰, kernel Ridge 回帰
Misc.: パラメトリック固有空間法, View Bubble

2. アイデア

3. 定式化

- 巡回群の行列表現: [x1 x2 ... xn-1 x0] = G [x0 x1 ... xn-2 xn-1]
列置換行列: X1 = X0 M
巡回群行列の分解: G = X1 X0+
巡回群行列の冪: G^j = U2 D^j U1

4. 複素対角化 (IS3-11)

Complex diagonalization details. M = W^H D W = W^H. Diagonal matrix D^j with entries e^{2πi j / n}. Intermediate image generation: x_{1+0.1j} = G^{j/10} x_1 = U_2 D^{j/10} U_1 x_1. Visualizations of real, imaginary, and absolute value parts of the images.

5. 実ブロック対角化 (IS3-10,06)

Real block diagonalization details. M = W^T D W = W^T. Block diagonal matrix D^j with 2x2 blocks A_k^j. Intermediate image generation: x_{1+0.1j} = G^{j/10} x_1 = U_2 D^{j/10} U_1 x_1. Visualizations of the real and imaginary parts of the images and their projection onto a 2D space.

6. 部分空間における距離を用いた姿勢推定

Distance-based pose estimation in a subspace. Projection of the image onto the subspace U1. Minimization of the distance ||U1 x - D^j U1 x0||. Graph showing the distance between learned and non-learned images as a function of the power j.

7. 部分空間における角度を用いた姿勢推定

Angle-based pose estimation in a subspace. Focus on block A1. Rotation angle theta = 2πj/n. Graph showing the distance between learned and non-learned images as a function of the angle theta.

8. 姿勢推定結果

Results of pose estimation. Comparison of distance method, angle method, and EbC method. Tables showing RMSE for 20 objects and robustness to noise. Maximum error and RMSE values for each method.

9. 今後の予定

3軸回転への拡張 2007年9月 PRMU/CVIM で発表予定 「見えに基づく姿勢推定のための複素部分空間と四元数部分空間の構築について」
