

Shock Compression of Earth Materials and Implications for the Composition of the Earth's Deep Interior

地球物質の衝撃圧縮と地球深部の組成の推定に関する研究

Youjun Zhang

Department of Earth and Planetary Systems Science,

Graduate School of Science,

Hiroshima University

Content of the thesis

Main Contents.....	III
Acknowledgements.....	IV
Table of Contents	1
Abstract.....	7
Chapter 1. Introduction	10
1.1 The structure and composition of the Earth's deep interior	10
1.1.1 The interior structure of the Earth and the seismic observations.....	10
1.1.2 Mantle minerals	12
1.1.3 The Earth's core.....	15
1.2 Shock wave compression techniques and theories	17
1.2.1 Shock compression techniques	17
1.2.2 Basic relations of shock waves	19
References.....	22
Chapter 2. Significance and current studies for hydrous magnesium silicates in Earth's interior.....	25

2.1 Introduction for hydrous magnesium silicates	25
2.2 Current studies of serpentinite at high pressures	27
2.3 The content of the first part for this thesis	29
Reference	30
Chapter 3. Dynamic compression and decomposition of antigorite and geophysical implications.....	34
3.1 Starting material.....	34
3.2 Experiments and conditions.....	35
3.3 Hugoniot and sound velocity of antigorite and evidence for sluggish decomposition.....	38
3.3.1 Hugoniot equation of state (EOS).....	38
3.3.2 Sound velocity	44
3.3.3 Partial released and recompression states	46
3.3.4 Shock temperature	48
3.4 Discussion on the decomposition reaction of serpentine under shock compression	52
3.4.1 Hugoniot of the dense hydrous magnesium silicate-phase H.....	52
3.4.2 Decomposition products of antigorite at high pressures.....	54
3.5 Conclusions and geophysical implications	60
References.....	62
Chapter 4. Significance and current studies for light elements of the Earth's core	66
4.1 Introduction for the Earth's core and light elements	66
4.1.1 Introduction of the chemical composition of Earth's core	66
4.1.2 Brief reviews of light element candidates of the core.....	67
4.2 Current studies of Fe-(Ni)-Si systems at high pressures and high temperatures	70
4.3 The content of the second part for this thesis	77
References.....	78
Chapter 5. Hugoniot density, sound velocity and melting behavior of Fe-Ni-Si system and implications for the Earth's core composition.....	86

5.1 Starting material and initial characterizations.....	86
5.2 Hugoniot equation of state measurements	88
5.2.1 Experimental setup and conditions	88
5.2.2 Hugoniot densities	89
5.3 Sound velocity measurements.....	92
5.3.1 Experimental setup and conditions	92
5.3.2 Sound velocity and shock melting	96
5.3.3 Shock temperature and melting curve.....	102
5.4 Discussion and geophysical implications	105
5.4.1 Thermal corrections along the geotherm of core	105
5.4.2 Implications for the composition of the liquid outer core.....	107
References.....	110
Chapter 6. Summaries and outlook.....	115
6.1 Summaries.....	115
6.2 Outlook	117
