学位論文要約

Mechanism of iron concentration around dislocation core in deformed olivine:

Implications for the dynamics of the upper mantle

(変形したカンラン石中の転位芯への鉄の濃集機構: 上部マントルのダイナミクスに与える影響)

山本 貴史

Department of Earth and Planetary Systems Science, Graduate School of Science, Hiroshima University

Content of the thesis

Abstract

Chapter 1 General introduction

Chapter 2 Microstructural observations of fracture-filling goethite vein from crustal fluid along the Kerajang Fault Zone in the Rengali Province of eastern India

Chapter 3 Deformation histories of peridotite xenoliths and alpine peridotites

Chapter 4 Deformation and metasomatic histories of Pinatubo peridotite xenoliths

Chapter 5 Iron concentration around a dislocation in naturally deformed olivine

Chapter 6 Experimental simulation of iron concentration around a dislocation

Chapter 7 Summary
