ABSTRACT

INTRODUCTION

RESULTS

Chapter 1 Generation of transgenic plants expressing aequorin.

Chapter 2 Active GA induces an increase in $[Ca^{2+}]_{cyt}$.

Chapter 3 Ca^{2+} channels are involved in the GA-induced increase in $[Ca^{2+}]_{cyt}$.

Chapter 4 GA induces an increase in $[Ca^{2+}]_{cyt}$ without degradation of DELLAs

Chapter 5 GA induces an increase in $[Ca^{2+}]_{cyt}$ independent of DELLAs

Chapter 6 Ca^{2+} is not involved in DELLA degradation

Chapter 7 DELLA independent transcriptional regulation
