

学位論文要約

Study of Magnetic Materials Combining Nitroxide Radicals and Coordination Complexes

ニトロキシドラジカルと遷移金属錯体からなる磁性体に関する研究

GAO YANLI

Department of Chemistry, Graduate School of Science, Hiroshima University

• Chapter I

Introduction1

• Chapter II

**Co-Crystallization of Achiral Components into Chiral Network by
Supramolecular Interactions: Coordination Complexes -Organic Radical**.....29

• Chapter III

**Synthesis, crystal structures and magnetic properties of six coordination compounds
constructed with pyridine iminomethyl-TEMPO radicals and [M(hfac)₂](M = CuII
and MnII)**.....58

• Chapter IV

**Crystal structures and magnetic properties of TEMPO derivatives- coordinated
copper(II) and cobalt(II) complexes**84

• Chapter V

**Ferroelasticity-like and solvent affect the paramagnetism of a copper-organic radical
coordination polymer**.....99

• Chapter VI

**Three-Dimensional Supramolecular Architectures with MnIII Ions Assembled from
Hydrogen Bonding Interactions: Crystal Structures and Antiferromagnetic
Properties**.....118

Chapter VII

Concluding Remark.....138

General concluding.....139

Acknowledgement.....142
