

学位論文要約

Nanostructures and optical properties of semiconducting polymer films:
novel solution processes and multidimensional analyses

(導電性高分子薄膜のナノ構造と光機能性：新規塗布法と多次元解析の開発)

坂田 俊樹

Department of Chemistry,
Graduate School of Science,
Hiroshima University

Content of the thesis

Table of Content

Chapter 1 General Introduction

Chapter 2 Nanostructure of PEDOT:PSS films and solar cell performance

Chapter 3 Oriented polymer films prepared by brush printing and its multidimensional analysis

Chapter 4 Development of 4D microspectroscopy technique: orientation and distribution of aggregates

Chapter 5 Orientation mechanism and dynamics of cellulose-templated PFO oriented films

Chapter 6 General Conclusions
