

学位論文要約

Physical Properties of $[\text{Ni}(\text{dmit})_2]^-$ Salts Controlled by Utilizing Ion Channels

(結晶中のイオンチャネルを利用した $[\text{Ni}(\text{dmit})_2]^-$ 塩の物性制御)

市橋 克哉

Department of Chemistry,
Graduate School of Science,
Hiroshima University

Content of the thesis

Chapter 1 Introduction

Chapter 2 Optimizing Lithium Ion Conduction through Crown Ether-Based Cylindrical Channels in $[\text{Ni}(\text{dmit})_2]^-$ Salts

Chapter 3 Selective Ion Exchange in Supramolecular Channels in the Crystalline State

Chapter 4 Carrier Doping in $[\text{Ni}(\text{dmit})_2]^-$ Spin Ladder by Utilizing Solid-State Ion Exchange

Chapter 5 Development of an Electrical Switching Device Operated by Solid-State Ion Exchange

Chapter 6 Magnetic Switching by Desorption/Adsorption of an Organic Solvent Molecule from/on $[\text{Ni}(\text{dmit})_2]^-$ Salt

Chapter 7 Conclusions

Acknowledgements
